# Weather Key Points

Regional Operations Center

Western Region

Monday, October 10

- Scattered showers and thunderstorms will again develop across the central and southern Sierra and the southern mountains and deserts Monday, persisting through Wednesday over the southern mountains
  - Widespread rainfall is not expected, but a few storms could bring locally heavy downpours as well as gusty winds and small hail
  - A few storms could also drift off the mountains into areas closer to the coast through Wednesday, though any activity near the coast looks to be very isolated
- Outside of any rain, breezy winds at times will maintain locally elevated fire weather conditions for the southern mountains and foothills through the week. Critical fire weather conditions are not expected.
- Additional scattered showers and storms could develop late in the week or into the weekend across portions of southern California and possibly the Sierra as well, though confidence in the timing or coverage of any rainfall remains low at this time. Widespread rainfall is still not expected.
